Drag & Drop Systems

About me

I am a full stack web developer with strong focus on scalable architecture and exceptional error handling. My softwares are both user focused and developer focused. Their UI guides the user and helps them navigate the software easily while the code is structure in a way where there is no magic. Everybody can understand it and pick up where they left off.

Education

Bachelors in Business Administration

2021 - Present

Punjab University, Lahore

Experience

Software Engineer

Full-time Position

July 2023 - Present

- Working as a full-stack developer with focus on creating scalable applications

Full stack Python developer

Freelance (Fiverr)

September 2019 - Present

- Creating and delivering tailored SaaS solutions that meet client requirements and industry standards
- Designing scalable and efficient applications while collaborating closely with clients
- Building custom web applications with focus on performance and user experience

Projects

Grevent – Social Networking for Entrepreneurs

Link

Django

Celery

RabbitMQ

Redis

ReactJS

MySQL

Tailwind CSS

Firebase

A feature-rich social networking platform for entrepreneurs with custom SEO engine, analytics system, feed, follow/follower features, chat application, and digital product sales through Stripe. Designed with scalability in mind to handle millions of users with optimized database queries and extensive caching.

ChopLine – Queue Management System

Link

Django

ReactJS

TailwindCSS

A comprehensive queue and kiosk management system for salons and barbershops featuring real-time updates via WebSockets, unified appointment & walk-in dashboard, staff management, service catalog, and detailed analytics. Deployed on AWS ECS with 99.9% uptime and ability to handle hundreds of concurrent sessions.

TurnPass

Link

Django

ReactJS

Tailwind CSS

Built TurnPass, an all-in-one business management platform featuring intelligent queueing, team scheduling, payroll automation and unified messaging. I crafted a React frontend with drag-and-drop calendars and real-time queue alerts, backed by a Django API handling timesheets, secure payroll, analytics and third-party integrations (Google Calendar, Stripe, QuickBooks). In pilots, customers saw 30% faster service, 25% more throughput and 20% lower admin costs.
