PROFILE

Accomplished full-stack developer with 5+ years of experience architecting and delivering high-performance SaaS platforms, CRMs, lead management systems, and dialer applications. Proven track record of optimizing backend performance (reducing API latency from seconds to milliseconds), handling millions of daily requests, and leading frontend teams. Combines deep technical expertise in modern stacks with a business-oriented mindset to drive measurable efficiency gains (300%+ improvements) and scalable solutions.

SKILLS

Languages & Frameworks: Python, Django/DRF, Node.js, React/Next.js, TypeScript, Celery, Redis, RabbitMQ, Kafka
Frontend: React, Next.js, Redux/Zustand, Tailwind CSS, Material UI, Axios, WebSockets
DevOps & Cloud: Docker, AWS (EC2, ECS, ECR, RDS, S3, CloudWatch), DigitalOcean, NGINX, CI/CD (GitHub Actions)
Databases: PostgreSQL, MySQL, MongoDB, Redis, Query Optimization, Indexing
Integrations & Tools: Twilio/Telnyx (SMS/Voice), OpenAI (AI agents), OAuth (Google/Facebook), Sentry, Selenium/Playwright
Architecture: Microservices, Load Balancing, Event-Driven Design, Caching, Background Processing

EXPERIENCE

Veeivs

Dec 2024 – Present

Lead Full Stack Developer

- Architect and building high-throughput dialer systems and real-time communication platforms handling **10M+ daily API requests** and **1M+ webhooks per day** from Twilio/Telnyx.
- Backend optimization initiatives: reduced average response time from 2 seconds to under 150ms through query optimization, indexing, Redis caching, and asynchronous processing with Celery.
- Created event-driven microservices architecture using Django, Node.js, RabbitMQ; executed horizontal scaling on AWS ECS with auto-scaling policies to handle traffic spikes.
- Integrated AI agents and voice bots using OpenAI and Twilio, automating 60% of customer interactions and reducing manual workload.
- Managed production databases (PostgreSQL RDS, Redis) and applied comprehensive monitoring with Sentry, CloudWatch, and custom dashboards to ensure 99.99% availability.
- Containerized all services with Docker and orchestrated CI/CD pipelines using GitHub Actions, cutting deployment time by 70%.

MarsBPO (Product Development Division)

Jan 2022 – Nov 2024

Senior Full Stack Developer

- Created and deployed enterprise-grade CRMs, lead management systems, and reporting dashboards for 100+ clients; processed over hundreds of thousands of api requests daily with fast response times.
- Led a team of 5 frontend developers, establishing reusable component libraries with React, Next.js, TypeScript, Redux, Tailwind CSS; introduced Axios interceptors and debouncing for optimal UX.
- Optimized backend services (Django/Node.js) by refactoring monolithic code into microservices, executing Celery/RabbitMQ for background jobs, and integrating Redis caching; reduced API latency from 1.5s to 150ms and cut database queries by 40%.
- Deployed applications on AWS ECS with Docker, auto-scaling, and load balancing (NGINX); maintained 99.9% uptime and reduced infrastructure costs by 25%.
- Integrated Twilio/Telnyx for SMS/voice alerts, OpenAI for AI-driven lead scoring, and OAuth (Google/Facebook) for seamless authentication.

Freelance SaaS Developer

Jan 2019 – Dec 2021

Self-Employed

Remote

- Delivered 50+ production-ready SaaS platforms for international clients, specializing in custom CRMs, e-commerce, and real-time dashboards.
- Architected scalable Django backends with React frontends, integrating Stripe, Google APIs, and other third-party tools; attained 100% client satisfaction.
- Built custom web scraping pipelines using Selenium/BeautifulSoup to aggregate competitor data for analytics platforms.

PROJECTS

Grevent

- Single-handedly architected and developed a comprehensive social networking platform for entrepreneurs, implementing a **custom 12 parameter SEO engine**, **real-time messaging** via **WebSockets**, a complete analytics engine, a complete logs system for the activity, and a digital marketplace with **Stripe** integration.
- Engineered high-performance feed algorithms capable of serving hundreds of thousands of concurrent users by optimizing **PostgreSQL** queries, implementing **Redis** caching layers, and designing asynchronous tasks with **Celery** and **RabbitMQ**.
- Accomplished a **65% reduction in page load times** through strategic database indexing, query optimization, and lazy loading frontend code splitting with **React** and **Tailwind CSS**.

ChopLine

- Created from scratch an enterprise-grade queue management system for salons, featuring **real-time WebSocket connections** for live appointment updates and a unified dashboard with **React** and **Material UI**.
- Architected the backend with **Django** and **PostgreSQL**, implementing complex scheduling algorithms and analytics pipelines; containerized the application with **Docker** and deployed on **AWS ECS** with auto-scaling.
- Constructed the system to handle **10,000+ daily appointments** with **99.9% uptime** by applying load balancing with **NGINX**, database connection pooling, and comprehensive monitoring via **AWS CloudWatch**.

Keynou Drive

- Private and Public routes.
- Multi tenancy and branded splash screens during redirects
- Analytics engine capturing user city, country, device the user came from, and many more
- Affiliate marketing system

EDUCATION

University of the Punjab

2021 – 2025

Bachelor of Business Administration (BBA)

Business education complements technical expertise with foundations in project management, team leadership, and strategic communication, enabling effective bridge between technical implementation and business goals.
